

# NONOGRAM

## Introduction

Nonogram, also known under many other names such as Hanjie and Picross, are picture logic puzzles in which cells in a grid must be colored or left blank according to numbers at the side of the grid to reveal a hidden picture. The numbers form a measure of how many unbroken lines of filled-in squares there are in any given row or column. For example, a clue of "4 8 3" would mean there are sets of four, eight, and three filled squares, in that order, with at least one blank square between successive groups. - Try and solve all puzzles in less than 100 minutes.

## Requirements

No extras required - not even the Memory Expansion. Insert cartridge and power up your console.

## Quick reference guide

ESDX or IJKL Move cursor.  
Q Color square (or remove color).  
W Flag square as blank (or clear flag).  
R Reset puzzle.  
B Blinking off (or on).  
N Next color when blinking is off.  
Enter Next puzzle when solved.  
Fctn = (Quit) Returns the computer to the master title screen.
